

IBG INVOICE — QUICK TOUR

The invoice app, in plain English.

Everything you need to make, send, and track invoices — explained the easy way.

01 What is this app?

IN ONE SENTENCE

It's how we make pretty PDF invoices — and remember who paid us.

Before this app, people made invoices by hand in Word, saved them in folders, and tried to remember the numbers. Things got lost.

Now the app does the boring parts (numbering, math, PDF design) and you just fill in the names and amounts.

THINK OF IT AS

**A smart notebook
that prints itself.**

You write what you sold. It writes the invoice and stamps it with the right number.

Invoice 23/04/2026-0001

02 What can it do for you?

1

Make invoices

Pick a client, add what you sold, and the app builds a clean PDF with our logo and bank details.

2

Track who paid

When the money arrives, you click "Mark as paid". The app remembers the date forever.

3

Print receipts automatically

The second you mark an invoice paid, the app makes a matching receipt PDF. You don't lift a finger.

4

Keep a perfect copy on Google Drive

Every PDF is also saved to a backup folder on Drive. So even if something breaks, the files are safe.

03 Two kinds of people use the app

User

That's most people. You can do all the day-to-day work: make invoices, mark them paid, add clients, look things up.

Think of it like a teacher in a school.

Super admin

Same powers as a User, plus the boring back-office stuff: add new companies, set up bank accounts, create new user accounts, edit the help articles.

Like the school principal.

You probably are: a User. If you ever need a button that's missing, ask a Super admin.

04 The life of an invoice

Every invoice goes through these stages. Most stop at "Paid" — that's the happy ending.

Why "Draft"? So you can fix typos before the invoice gets a real number. Once it's "Issued", the number is set in stone — that's how accounting stays tidy.

05 How to make a new invoice

1. Click **Invoices** on the left, then + **New invoice** top-right.
2. Pick a **template** — that fills in our company and bank for you.
3. Pick the **client**. Don't see them? Click + **Quick add**.
4. Set the **issue date**. Due date fills itself in (5 days later).
5. Add what you sold — usually one line is enough.
6. Click **Save draft**. Done.

REMEMBER

A draft is just a sketch.

Nothing is sent, nothing is final. You can come back tomorrow and finish it. The number only gets stamped on when you click "Issue".

06 Templates — pick the right "stamp"

A template is just a shortcut. It says: "Use *this* company, *this* bank account, and *this* currency."

We have nine templates because we have nine companies. Pick the one your client should pay into.

IBG THB

Most common. Thai company, paid in Thai baht.

IB Group USD

Offshore company, paid in dollars.

Wise / Crypto / IBG Kas

Special cases — only use if you know the client wants this.

Blank

Pick everything yourself. Use only if nothing else fits.

JUST LIKE AT SCHOOL

Don't sweat the choice.

Templates are like worksheet headers your teacher pre-fills. You can still change anything below — they just save typing.

Most days you'll just pick "IBG THB"

07 Adding a client (we call them "counterparty")

Quick way

Inside the invoice form, click + **Quick add** next to the client picker.

Type their name (Tax ID and address are optional — fill in later).

Save → they're picked for this invoice and saved for next time.

Full way

Use this when you have time and want to add full details (email, language preference, notes).

Click **Counterparties** on the left → + **New counterparty** → fill in the form.

Tip: Preferred language decides if their PDF comes out in English or Thai.

Already in the list? Always pick the existing one. Never create a duplicate — accounting has to merge them later by hand.

08 Issuing — making it real

When the invoice is ready to send, open it and click the big black **Issue** button.

Five things happen at once:

1. The next number is stamped on (e.g. **23/04/2026-0001**).
2. Today's exchange rate is locked in (if needed).
3. A polished PDF appears.
4. The PDF is also saved to **Google Drive backup**.
5. Status changes from "Draft" to "Issued".

3 sec

Average time from clicking Issue to having a sendable PDF.

Don't confuse "Generate PDF" with "Issue".

Generate PDF on a draft only makes a preview. Only **Issue** publishes the invoice with a real number.

09 Got paid? Click one button.

Open the issued invoice → click the green **Mark as paid (+ receipt)** button.

It will ask for the **payment date** (default: today). After that:

1. The invoice flips to **Paid**.
2. A new **receipt** is born — same number plus "**-R**".
3. Both PDFs are made and backed up.
4. The receipt shows up under **Receipts** on the left.

PINKY PROMISE

You never write a receipt by hand.

The app does it. Always. If you need to share the receipt link with the client, click **Copy public link** on the receipt page.

23/04/2026-0001-R

10 Made a mistake? Pick the right fix.

Wrong amount, typo, wrong line

Edit the invoice — yes, even after it's issued or paid. The PDF and receipt re-generate automatically.

A yellow banner reminds you that the invoice is published.

Whole invoice was a mistake

Cancel it. The PDF gets a red "CANCELLED" stamp. The number is kept (accounting needs the trail).

Already paid? You can't cancel — refund externally and make a new credit invoice.

Don't want it in the main list anymore

Archive it. Goes to **Archive** in the sidebar. You can restore any time.

It was just an unwanted draft

Delete the draft. Drafts have no number, so deleting them leaves no trail. Issued invoices can never be deleted, only archived.

11 Where to find things

I IBG Invoice

- ◆ Dashboard
- ☰ Invoices
- 📁 Archive
- ✓ Receipts
- ♻️ Counterparties
- ? Instructions

ADMINISTRATION · SUPER ADMIN ONLY

- △ Our companies
- Users

Dashboard

Snapshot of the day — totals, recent activity.

Invoices

The main list. Where you live most of the day.

Archive

Old invoices you tucked away. Restore from here.

Receipts

Auto-made receipts for paid invoices.

Counterparties

The client address book.

Instructions

The help articles. Read when you're stuck.

Our companies / Users

Super admin only. Don't worry about these.

YOU'RE READY

That's the whole tour.

Stuck? Click **Instructions** in the sidebar — there's a help article for almost every screen. Still stuck? Ask the team.

The app is forgiving: drafts can be deleted, mistakes can be edited, and every PDF is backed up to Google Drive. Don't be afraid to click around.
